HITCH SENTRY

EXTREME MONITORING

The HitchSentry is an easily deployable surveillance system designed to be that true "Force Multiplier" needed by law enforcement, the DOT, emergency response teams and the like. It provides onsite event recording capabilities and allows for much needed remote viewing to keep those who need to know instantaneously updated of the activities as they develop.

Key Features

- **Storage**

Lightweight enough for one person to carry, the unit collapses down to a convenient 48" size that fits in its canvas tote bag for easy storage in your vehicle trunk or SUV.

- **Easy Deployment**

Set up is quick and easy by sliding its base into any standard vehicle mounted 2-inch standard tow hitch. The telescoping mast can then be raised to the desired height of up to approximately 14 ft. from the ground.

- **Powered from Vehicle**

No extra 'battery weight' to carry around with this special unit. Simply plug into the standard trailer wiring harness connection for 12 VDC power from the vehicle.

- **High Quality Video & Remote Access (internet connection)**

High quality Pan, Tilt & Zoom camera configurations are available, including day/night, HD, network based IP camera and up to 30 X optical zoom. Features optional 'At the Edge' embedded video management and storage capabilities.

- **Many Different Applications**

- | | |
|-----------------------|--------------------------|
| - Law Enforcement | - Hazmat Situations |
| - Tactical | - Auto Accidents |
| - Special Events | - High Crime Areas |
| - Concerts/Fairs | - Fire Departments |
